|04

Accounting BPO with digital client platform

How the BPO services and digital platform help your company

01

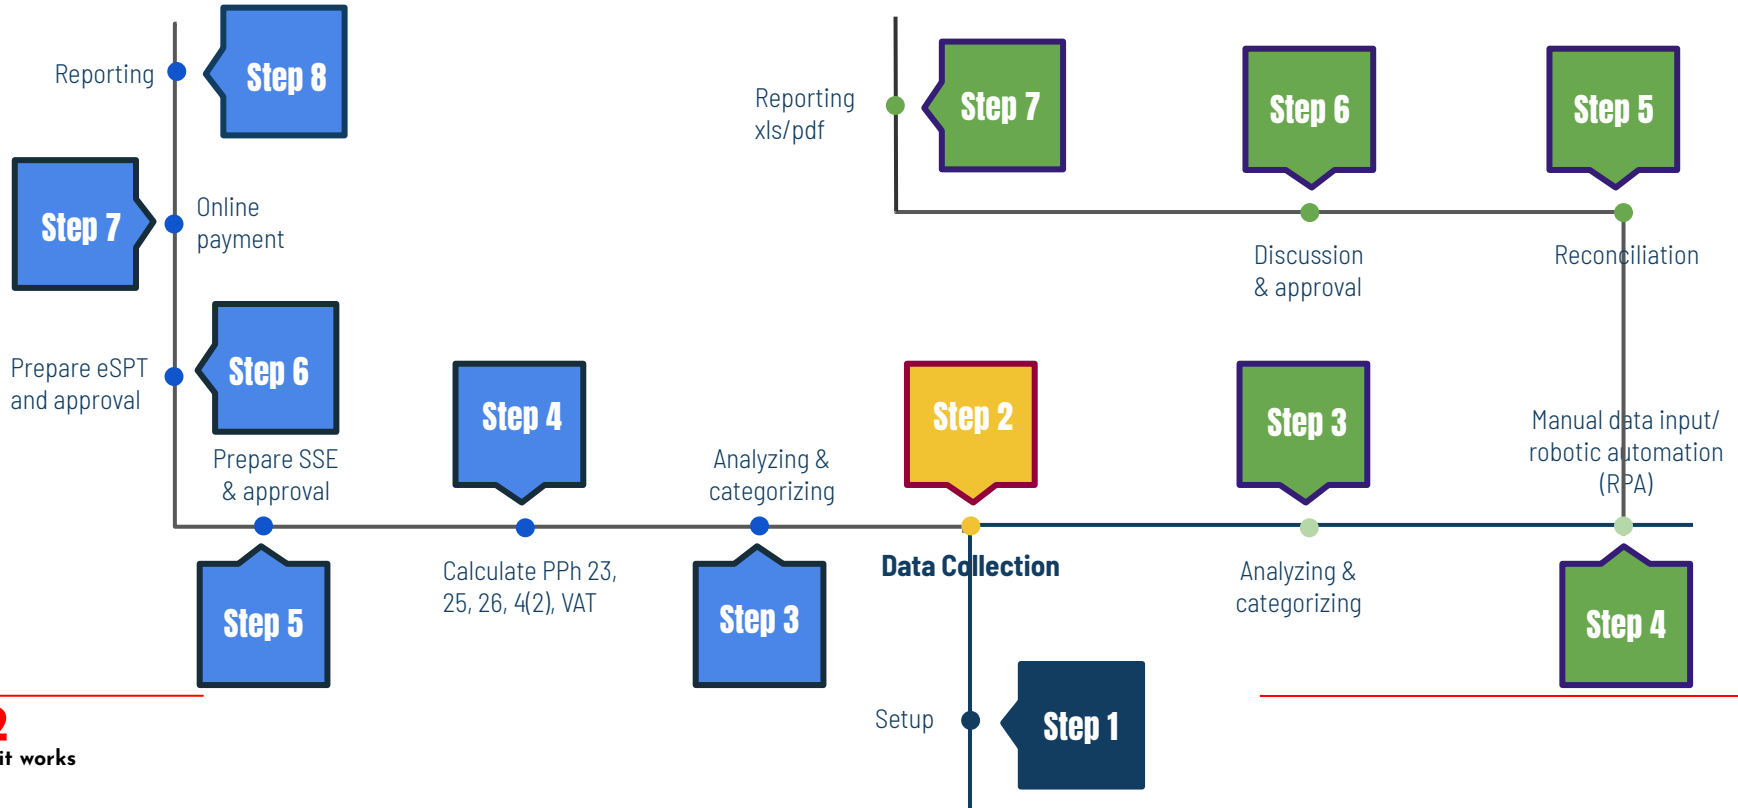

How It Works

Step by step

TAX COMPLIANCE

ACCOUNTING

02

**Accounting BPO
service and
software in one!**

The advantages you will get

Cost Saving

You can outsource the business process to our office (we do not place our HR into clients' offices). We help you save on accounting service budget by offering free access to our digital client platform for up to 3 users if you don't have any.

Sharing tasks

You can sharing daily tasks with us, like who will create the sales/purchase order, then who create sales/ purchase invoices

Minor Customization*

Our digital client platform have been developed to be customizable to each client's unique needs, not only for document formats but also for processes. Yup.. **CUSTOMIZABLE FOR EVERY CLIENT'S UNIQUE NEEDS!**

What to consider

Communication

We prioritize the use of email in addition to the availability of chat apps or SMS. Because we are not in your office, there may be communication delays caused by this reason.

Working timeline

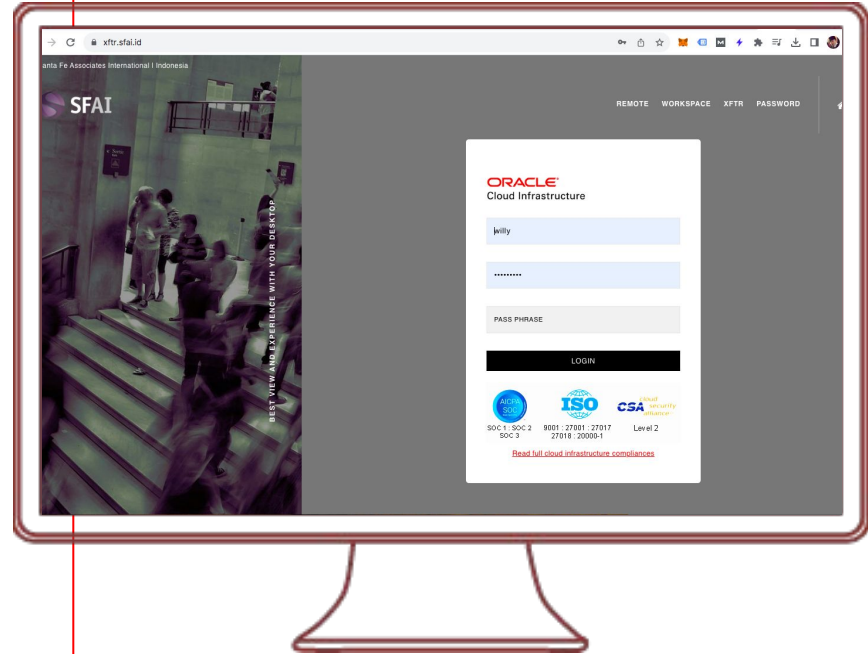

Since we will provide 1 PIC for each client, the PIC will handle some clients. So we must prepare and agree on a working timeline when starting the assignment.

More time to customize

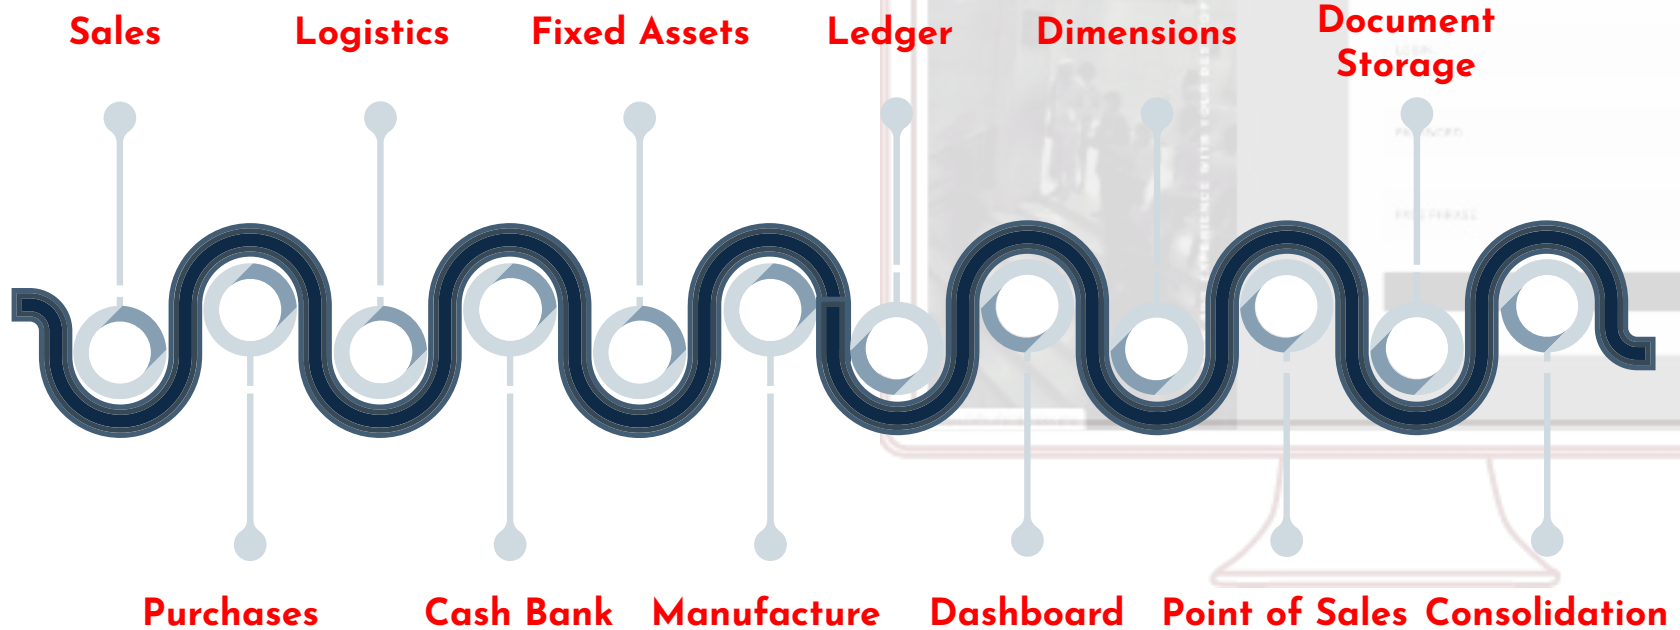

We are not an IT/tech company. Even though we developed our platform internally, customization based on each client's needs will take more time than other software subscriptions (which, in most cases: **YOU CANNOT!**)

Digital Client Platform

Digital Client Platform - Features 1

Digital Client Platform - Features 2

Multi Approval System

Timeline

Multi Factor Authentication

04

Accounting BPO with Digital Client Platform

How to Start

Phase 1

After signing the assignment letter, dig into further understanding the client's business details, set up general company info, and input/import the existing Chart of Accounts (if any).

Phase 2

System & GL Setup (for default CoA of particular transaction type). Determine payment term(s) and transaction references.

Phase 4

Creating Dimension/Project/ Department (if any) and documents formatting (if needed) - based on **Phase 1**

Phase 5

Start to input/import the opening balances, and *import existing transaction (based on ledger) - if any.

Phase 3

The *importing process, includes suppliers & customers, fixed assets, items/services to be sold/purchased, bank setup (foreign currency, if any).

- Creating minor custom needs by each clients.
- Creating user role based on company needs.

The screenshot shows the SFAI digital platform interface. The top navigation bar includes tabs for Sales, Purchase, Logistics, Manufctr, F/Assets, C/Bank, Taxes, Ledger, Document, CRM, HCM, Team, PDS, and Setup. The left sidebar menu lists various modules such as Transactions (Payments, Deposits, Bank Account Transfers), Inquiries and Reports (Bank Account Inquiry, Disbursement Inquiry, Banking Reports), C/B Maintenance (Bank Accounts, Trx API Login, Currencies, Exchange Rates), and Tutorial (Trx API Tutorial, Cash/Bank Module Tutorial). The main dashboard area contains four 'Undefined' cards and two 'Top 10 Dimensions in fiscal year' tables. The right table shows a list of dimensions with values ranging from 0 to 0.875.

05

Data Confidentiality Backup & Disaster Recovery

Employee Responsibility

Internal employees responsibility

Our employees have been aware of and signed confidentiality agreements regarding client data during recruitment.

One of our internal HR functions is to ensure that each person in charge is fully committed to the confidentiality of client data in every assignment. We continuously conduct regular outreach regarding this matter.

Data access roles for daily operation

Data access restrictions and classifications apply to data received from clients.

We implement access roles for different job levels for daily internal activities for various client data access.

About Infrastructure, Database, and Raw Data

Private cloud for accessing raw data storage

We maintain our dedicated servers to provide data access to clients (we do not use public services), protected by firewalls and backup processes are performed every 8 hours daily.

Email data storage and spam protection

We maintain our dedicated mail server to archive all historical data, even if staff changes occur at any time.

Oracle Cloud Infrastructure (OCI)

Our digital client platform hosted in OCI (Singapore region) and following their compliance. We are also implement disaster recovery for clients database.

Multi Factor Authentication with Cisco DUO

We are adding multi-factor authentication from Cisco DUO to access digital client platform and private cloud.

Our technology reference

ORACLE
